DETAILED ACTION

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

On page 22, line 1, "is disclosed herein" should be avoided.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-^{are}5 rejected under 35 U.S.C. 102(b) as being anticipate by Lebling et al.[US. 6,141,007].

As to claims 1 and 2, Lebling et al. discloses means for splitting a display window by dragging a mouse from one point in the display to another point in the display and means responsive to said mouse dragging wherein said display divides and forms a separate display window on at least one side of a line defined by said

Art Unit: 21.74

mouse dragging; means for splitting a display window by defining with a mouse two points in said display, said two points defining a line (figure 5A, column 5, lines 30-50).

As to claim 3, Lebling et al. also discloses receiving a set of coordinates relative to said display window from a user, said coordinates defining a line (column 12, lines 10-19 and lines 46-59); and dividing said display window into a plurality of panes, said panes defined by said line and said frame borders (figures 3A-5B), column 6, line 60 through column 7, line 5.

As to claim 4, Lebling et al. teaches the line intersects opposing borders of said display window (figure 5A).

As to claim 5, Lebling et al. also teaches the coordinates are provided by a user via a pointing device (column 4, lines 26-55).
